/note="Organ: Brain; Vector: pyx- Asc; Site_1: EcoR I;
/site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pyx-Asc vector. The library tag;
sequence located between the Not I site and the polyh tail
is CGAACTGAAT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Bervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a human beta-transducin repeat containing protein (beta-TrcP). The protein directs proteins to the proteosome degradation pathways. The protein is able to interact with the Vpu protein of human immune deficiency virus-1 (HIV-1), callular proteins impune of the protein of protein of human immune deficiency virus-1 (HIV-1), callular proteins in the protein of the protein of proteins and thus their targeting to proteosomes for degradation. Depending on whether the protein controls inhibited or promoted, the result may be delayed breakdown of CD4 (in cases of HIV-1 infection); increased activity of IMB (and thus reduced activity of NFkappaB) and increased degradation of mutant bC in tumour calls, or increased bc survival (and reduced apoptosis) in Alzheimer's patients. The beta-TrCP protein, and its active peptide fragments, or its nucleic acid, are used to screen for anti HIV-1 agents (antivirals), antitumour agents that disrupt call cycle regulation or protein are also useful for treating osteo-articular inflammation or acute inflammation associated with release of tumour necrosis factor.

This DNA encodes human beta-TrCP, an F-box/WD protein family member, which has been shown to have homology to human E3 ubiquitin ligase (E3). E3 enhances ubiquitination of phosphorylated I-kappa-B, an inhibitor protein of nuclear factor kappa-B (WF-kappa-B). Understanding I-kappa-B degradation via the ubiquitin pathway is useful for identifying addition via the ubiquitin pathway is useful for identifying activation of NF-kappa-B. In vitro analysis suggests that deletion of this process for use in treating diseases associated with activation of NF-kappa-B. In vitro analysis suggests that deletion of he F-box results in a protein that functions as a dominant negative molecule in vivo. Translant over-expression of delta-ber_TrCP (a deletion mutant) inhibited the degradation of endogenous I-kappa-B-alpha in stimulated Jurkat cells, resulting in accumulation of phosphorylated I-kappa-B-alpha-B. and beta-TrCP can be used to modulate NF-kappa-B to treat inflammatory diseases, autoimmune diseases, cancer and viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             301 GGCACTTCCAGTATGATTGTGCCCAAGGAAACTCTCAGCAAGCTATGAAAAGGAA 360

Novel nucleic acid for screening compounds useful for treating proliferative and differentiative disorders such as cancer and immune disorders comprises sequences encoding ubiquitin ligases -Nucleic acids encoding substrate-targeting subunits of ubiquitin ligases with F-box motifs (F-box proteins) are useful for diagnosis of proliferative and differentiated related disorders by measuring FBP gene expression. Cells expressing such proteins or their fragments are useful for screening compounds. The compounds are agonists or anteagonists, which are useful for treating a proliferative or differentiative disorder in a mammal such as breast, ovarian and prosetate cancer and small also major opportunistic infections, immune disorders, cardiovascular diseases and inflammatory disorders. FPP protein, are also useful in diagnosis of the disorders. Disclosure, Figure 3b, 3c, 3d; 245pp; English

Sequence 2151 BP; 628 A; 467 C; 513 G; 543 T; 0 other;

```
ligases) which can be used for the targetted degradation of a target polypeptide in vivo. Targetted degradation is achieved by expressing the target to the unlearaction domain of the target polypeptide and thereby recruiting the target polypeptide on thereby recruiting the target polypeptide increasing the level of a target polypeptide and for creating or increasing the level of a target polypeptide and for creating and expressing a destabilized polypeptide which is subjected to SCF mediated proteolysis. Degrading any desired protein in a cell is weful for preventing or treating diseases caused by the presence of abnormal amount of the specific polypeptides, for drug discovery and for gene therapy. Diseases treated include cancer, by degradation of concoproteains, Huntington's disease, other proliferative disorders and microbial infections. The method provides a quick and easy alternative to gene knockout technology. The target polypeptide can be degraded at all stages, or a specific stage, of development in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GAATGGTACCGAGTGACCTCTGATGCTGTGGGAAGAAGATGCTTATCGAGAGATGGTC

                                                                                                                                                                                                                                                                                                                                                                                                   2100
                                                                                                                                                                                                                                                                                                2040
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to methods of altering the polypeptide levels in a cell, using proteins selected from S-phase kinase associated proteins 1 and 2 (SKP1, SKP2), SKP2-like proteins (ST) and CUL-1 (a member of the cullin/ CDC53 family of proteins). The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or BG1-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modulating polypeptide levels in a cell, diagnosing and treating tumor, involves altering levels of proteins such as S-phase kinase associated proteins 1, 2 and cullin/CDC53 proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to screening compounds useful for the treatment of proliferative or differentiative disorders comprising detecting a change in the activity of Skp2 (F-box protein). The method is useful for screening compounds for the treatment of proliferative or differentiative disorders, particularly cancer. These compounds include small molecules, or compounds or derivatives or analogues of the new ubiquitin ligases. The compounds are useful for treating diseases such as cancer (e.g. breast cancer, prostate cancer or ovarian cancer, lymphoma, small cell immune disorders, certain cardiovascular diseases or infections, disorders. This polymucleotide sequence represents the cDNA encoding an F-box protein (FBP) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The invention relates to a complex of protein-protein interactions (forming a protein-protein interaction map, PIM) in adipocyte cells as defined in the specification, or polymucleotides in adipocyte cells as defined in the specification, or polymucleotides in adipocyte cells and a method of selecting a modulating compound in adipocyte cells, by cultivating a recombinant host cell on a selective interacting polypeptides and a method of selecting a modulating compound and a reporter gene the medium containing a modulating compound and a reporter gene the medium containing a modulating compound and a reporter gene the medium containing a first hybrid polypeptide and DNA binding compound which two vectors, where the first vector comprises a polymucleotide encoding a first hybrid polypeptide and DNA binding domain and the second vector comprising a polymucleotide encoding a second hybrid polypeptide and an activating domain that activates the toxic reporter gene, when the first and second hybrid polypeptides interact and selecting the modulating compound which inhibits the crowth of the recombinant host cell (i.e. using the yeast two-hybrid system). The complexes are useful for identifying compounds that modulate the protein-protein interactions and useful for treating obesity and metabolic diseases. The interactions between the proteins of the complex further define a set of selected interacting domains, SID. The present sequence encodes a member of the protein complex of the protein in the yeast two-hybrid assay.

Note: The present sequence was not displayed in the specification but

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one of 251 novel human polynucleotides expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV) bacterial or fungal infection, or may result from an autoimmune disorder, a cogulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation. Suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Describe presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of chemical compounds as potential drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

The present sequence is a cDNA obtained from Incyte clone 3239149 of COLAUCTO1 library. It encodes cell signalling protein-12 (CSIGP-12). It is expressed in musculo-skeletal, gastrointesinal and nervous tissues. Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic hybridisation probe for detecting CSIGP related sequences or allelic than variants. Recombinant CSIGP can be produced in host cells by transforming them with genetically engineered vectors. Agonists or antagonists can be used in the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative disorders like attentosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders disorders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTATGATTGTGCCCAAGCAACGGAAACTCTCAGCAAGGTATGAAAAGGAAAAGGAACTGT 370

                                                                                                                                                                                                                                         The present sequence is one of 251 novel human polynucleotides expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation. System disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it condes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of chemical compounds as potential drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     800

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GAATITIGIGGAACAICITATAICCCAAAIGIGICATIACCAACAIGGGCACAIAAACICG 471
production of other cytokines in other cell populations. The polymorleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, insulin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78123-AM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, itsue growth factor activity, immunomodilatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                               Human, cytokine, cell proliferation, cell differentiation, gene therapy, vaccine, peptide therapy, stem cell growth factor; haematopoiesis, tissue growth factor; mmunomodulatory; cancer; leukaemia; nervous system disorder; arthritis, inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inflammation.

Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80102) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activithy and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.

The present invention describes an F-box motif protein of ubiquitin ligase SCF complex which promotes the ubiquitination of IkappaB or beta-catenin and is constituted by Skpl protein, Cull protein and a complex (SCF complex) of F-box protein containing F-box motif and WD40 complex (SCF complex) of F-box protein containing F-box motif and WD40 or one of two 569 residue sequences (AAB12812, which is mouse ubiquitin ligase FWD1 protein) and (AAB12813, which is human beta-transducin ligase FWD1 protein (beta-TrCP). The F-box protein can be used for the gene therapy of colon cancer by being recombined to a virus vector. The present sequence encodes the human beta-TrCP protein from the

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAW78329-AAM89302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TITIATGAATTCCTCAGAGAGAGACTGTAATAATGGCGAACCCCCTAGGAAGATAATA
